

ShopSmart – Our Digital Grocery Store

ShopSmart is a smart and simple online grocery shopping website developed by **our team**. It's built to make both online shopping and product management easy and efficient. The platform is divided into two main sections — the **User Side** and the **Admin Side**.

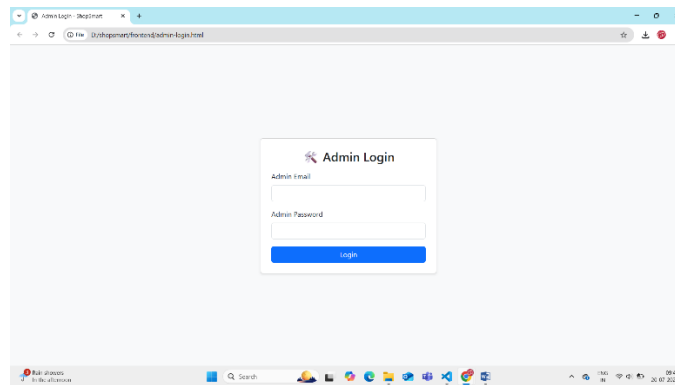

User Side

- **Home Page:** Displays all available grocery items in a card layout with name, image, price, and description.
- **Search Bar:** Allows users to search for products by name or category quickly.
- **Add to Cart:** Users can add products to their cart for later purchase.
- **Wishlist:** Favorite items can be added to the wishlist for easy future access.
- **Orders Page:** Shows all orders placed by the user, along with an option to cancel within a specific time.
- **Profile Page:** Users can view and update their personal information.
- **Buy Now:** Instantly purchase a single product without using the cart.
- **Register & Login:** Mandatory for accessing cart, wishlist, profile, and order features.

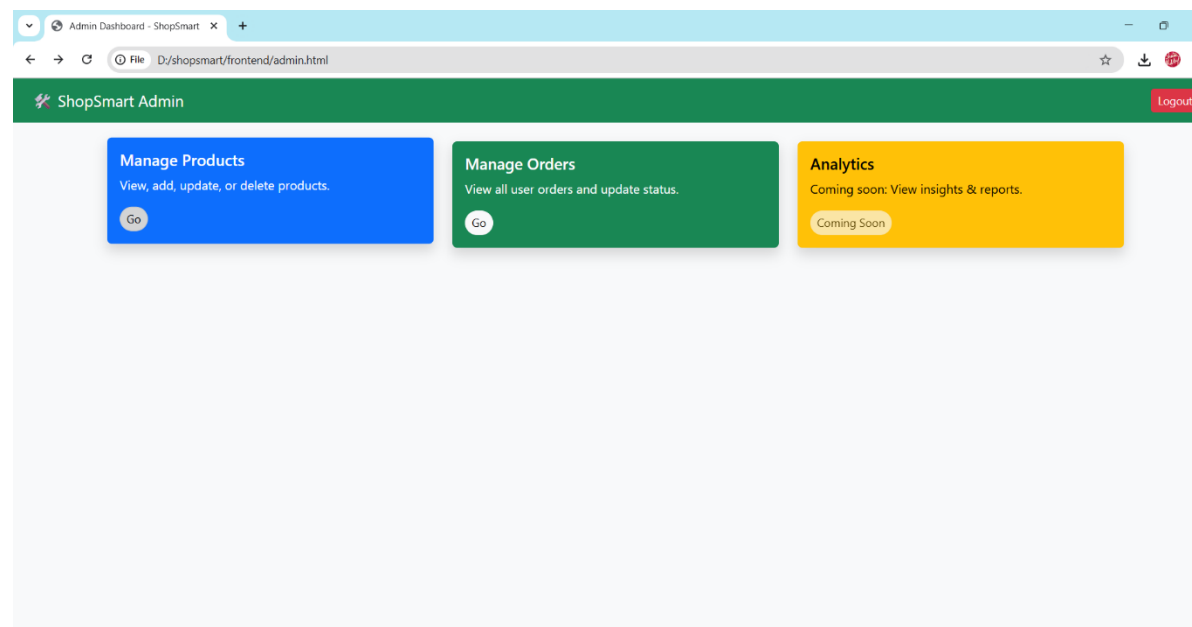

Admin Side

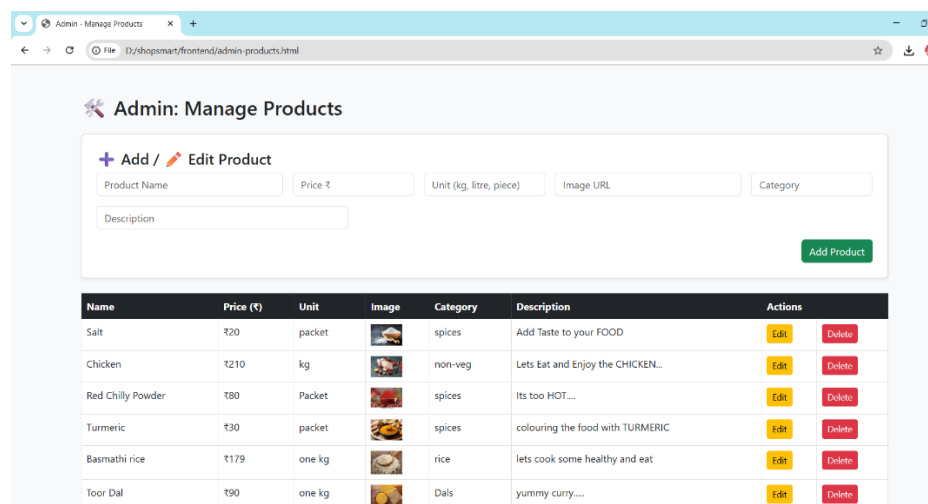

- **Admin Login:** Only authorized admins can log in to manage the site.

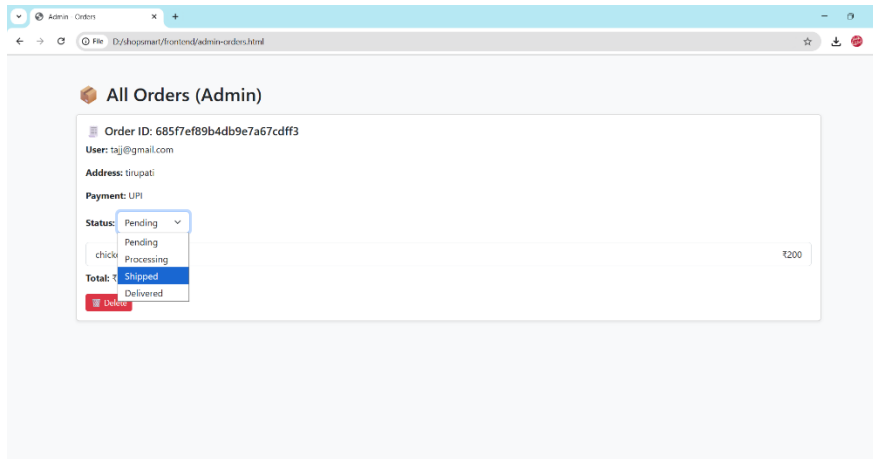

- **Dashboard:** The central place for managing the store.

- **Add Product:** Admins can add new grocery items.
- **Edit / Update Product:** Allows changes to product details like price, image, or description.
- **Delete Product:** Remove outdated or unavailable products.

- **Order Management:** Admins can view all orders and update their status as **Pending**, **Shipped**, **Delivered**, or **Cancelled**.

★ Why We Built ShopSmart

This project was part of our assigned academic work, and our goal was to create a functional and user-friendly grocery web app. Our focus was on covering all key features a real grocery store would need, from smooth product browsing to efficient backend management.

We made sure the platform ensures a **secure**, **fast**, and **convenient** shopping experience for users while giving admins full control over inventory and orders.
